

Minex – Central Asia Forum

Astana – Kazakhstan, March 17-19 2015

“Integration of Remote Sensing,
Satellite Data, Lidar and Geophysics
into a Kazakhstan GIS”

Gary Tipper – Int. Business Development
SkyTEM Surveys

Dr. Boris Geldyev – CEO
TERRA Remote Sensing and GIS

Minex Central Asia Forum 2015

- Introduction of SkyTEM and TERRA
- previous data availability in Kazakhstan
- advantages of data integration
- examples of remote sensing data types
- examples of airborne geophysical data
- discussion of new Geoportal GIS

SkyTEM Surveys

- Established in 2004 – spin-off Aarhus University
- 40 people – Denmark, Canada, Australia, S.Africa
- Large R&D group

SkyTEM HQ - Aarhus, Denmark

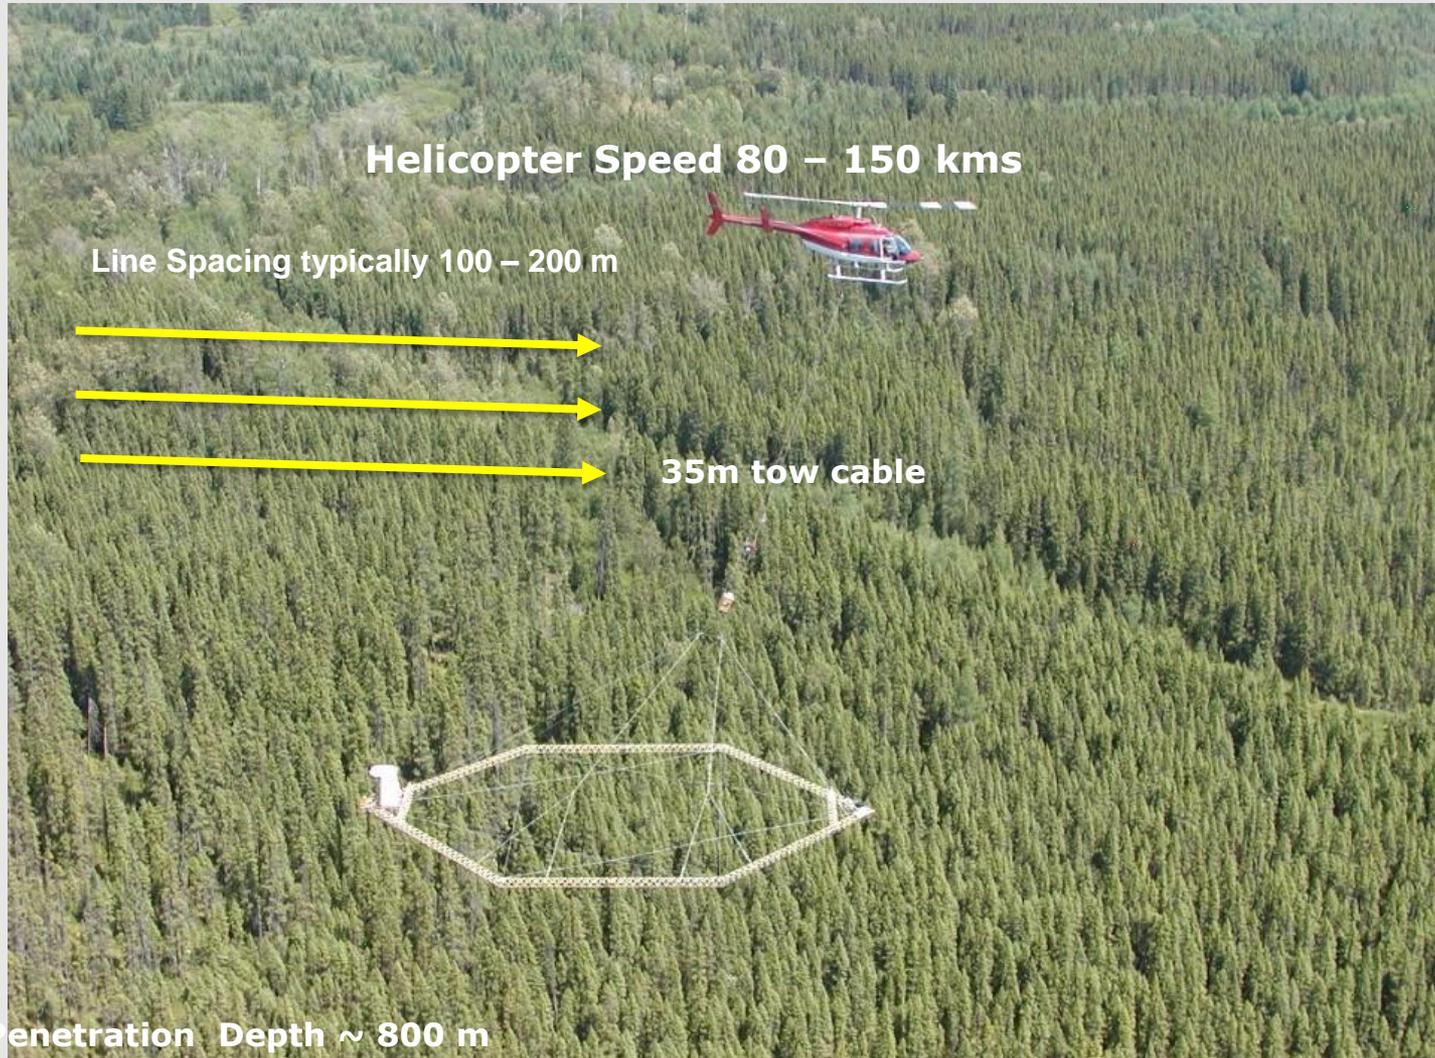

Terra Remote Sensing and GIS

- based in Almaty Kazakhstan
- specializing in Remote Sensing, Satellite Imagery, Lidar, GIS
- field operations for conventional surveys, as built, DTM's
- expert staff in geology, geophysics and GIS
- Geomatics
- Aerial Photography
- Environmental Studies and Consulting
- Project Development
- well respected with existing Government and Private sector clients within Kazakhstan

Geophysics, Remote Sensing and Lidar Definitions

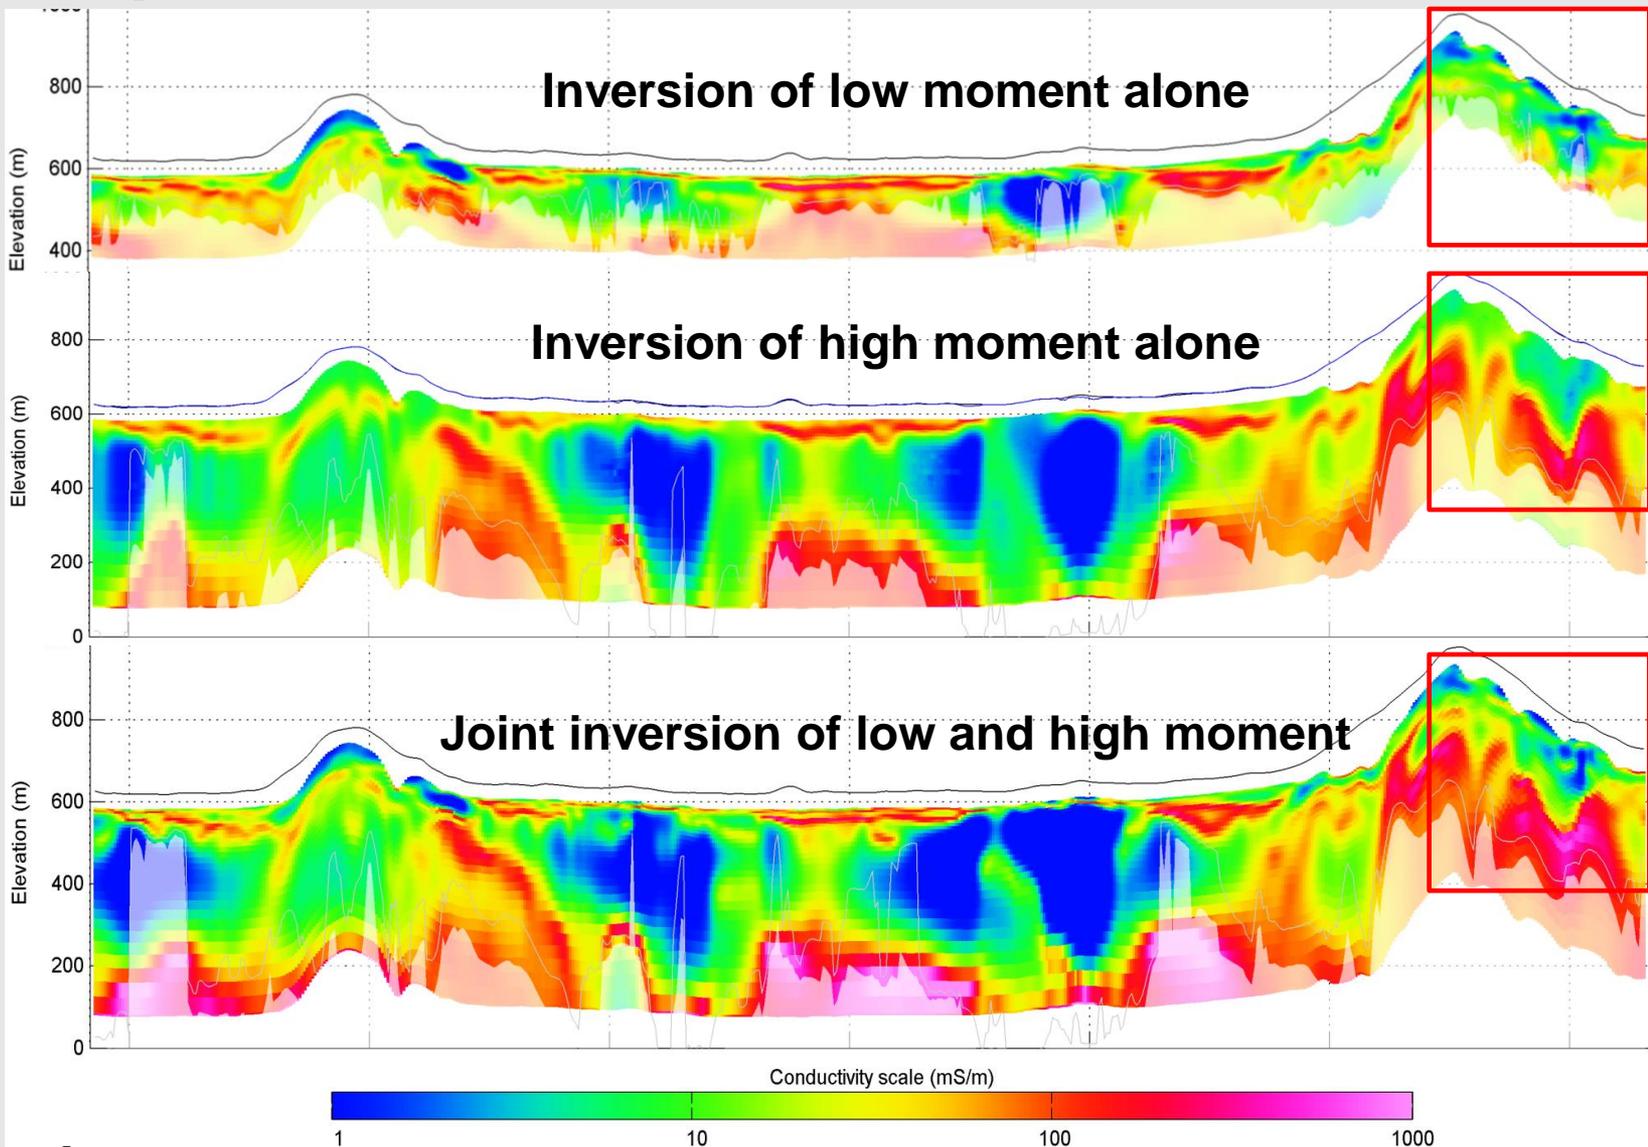

- “Remote sensing - is the science of acquiring information about the Earth’s surface without actually being in contact with it.” [National Resources Canada](#)
- “Lidar – (Light detection and ranging) is a remote sensing method that uses light in the form of a pulsed laser to measure ranges (variable distances) to the Earth”. [NOAA](#)
- “Geophysics – the physics of the Earth and it’s environment, including the physics of fields such as meteorology, oceanography, and seismology.” [Wikipedia](#)

SkyTEM – Time Domain EM/magnetics

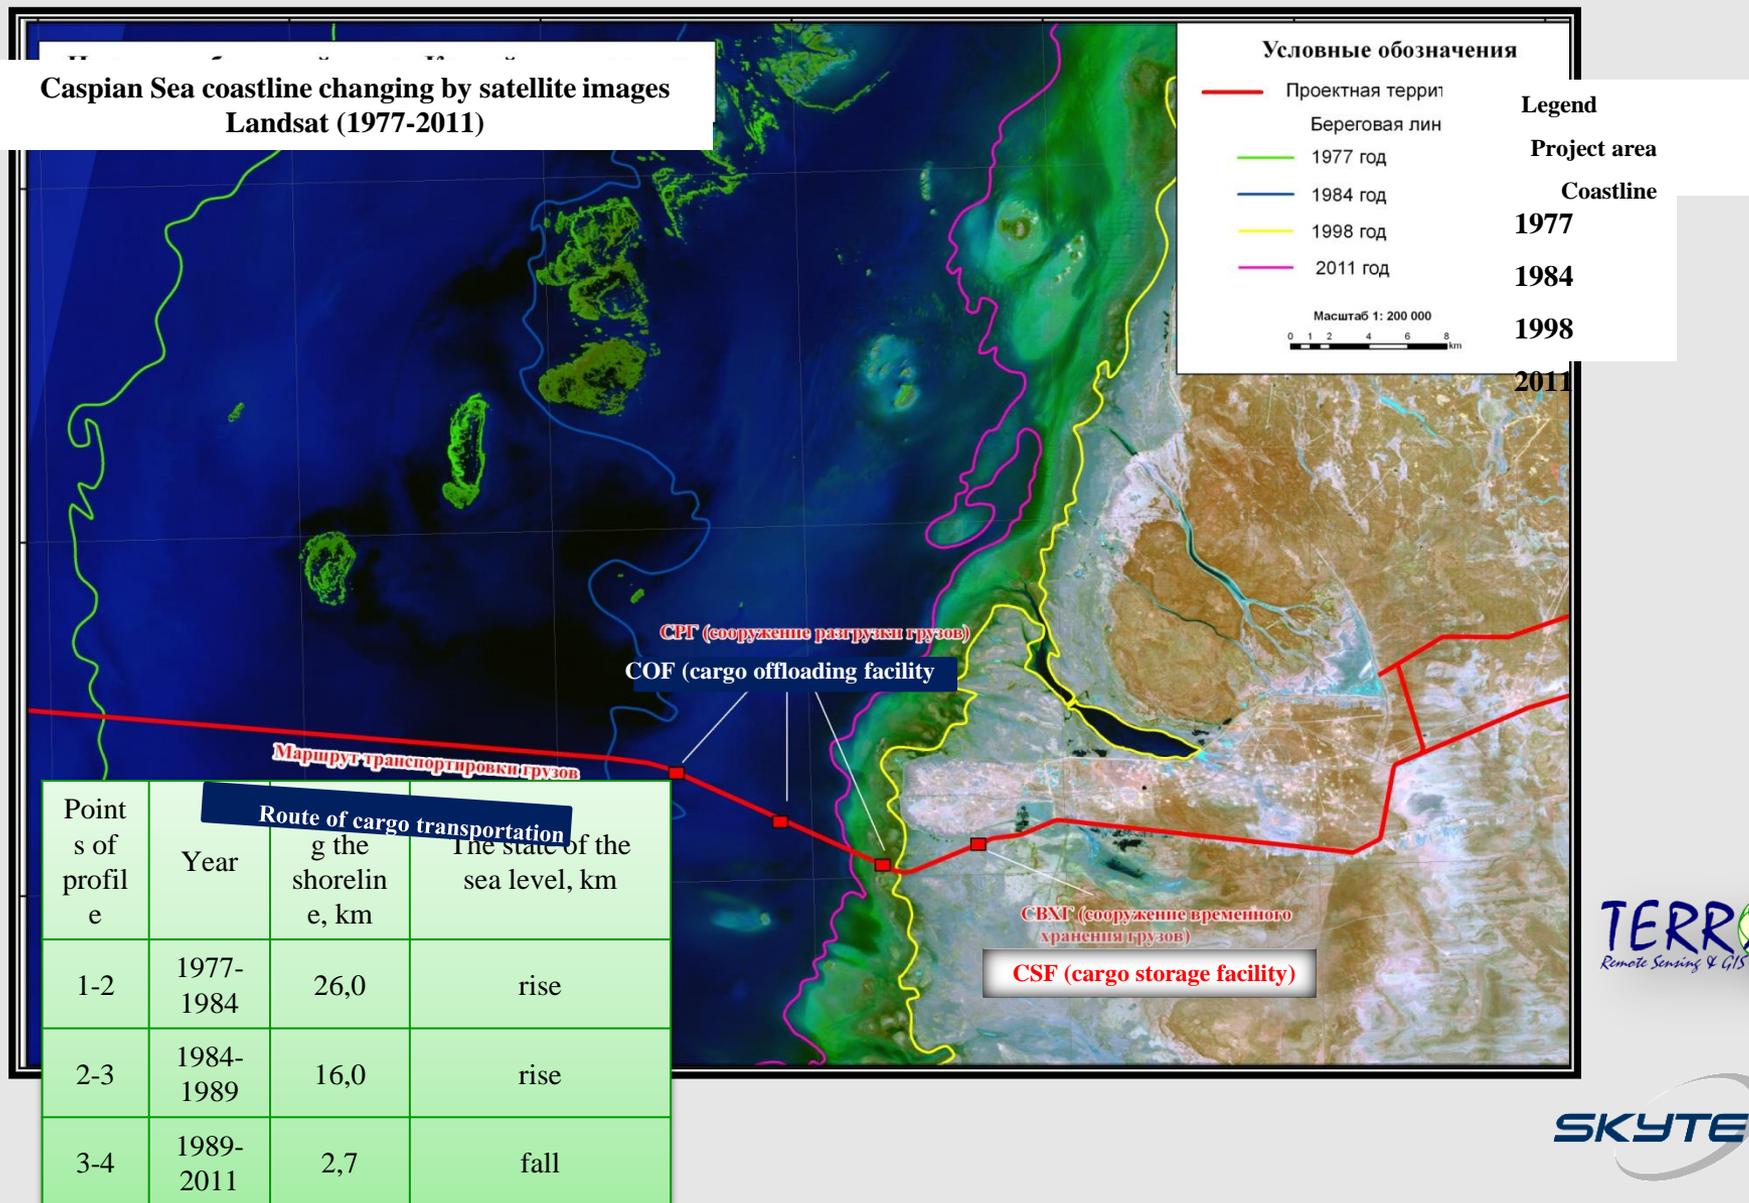

MultiMoment SkyTEM508

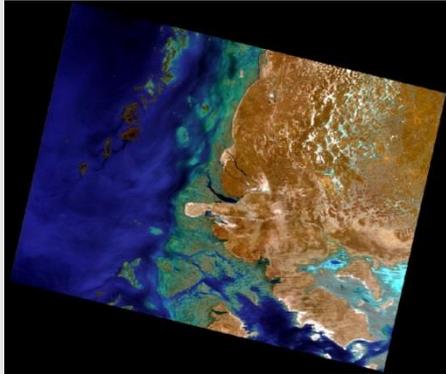

Layered earth

Ecosystem classification using satellite data Landsat

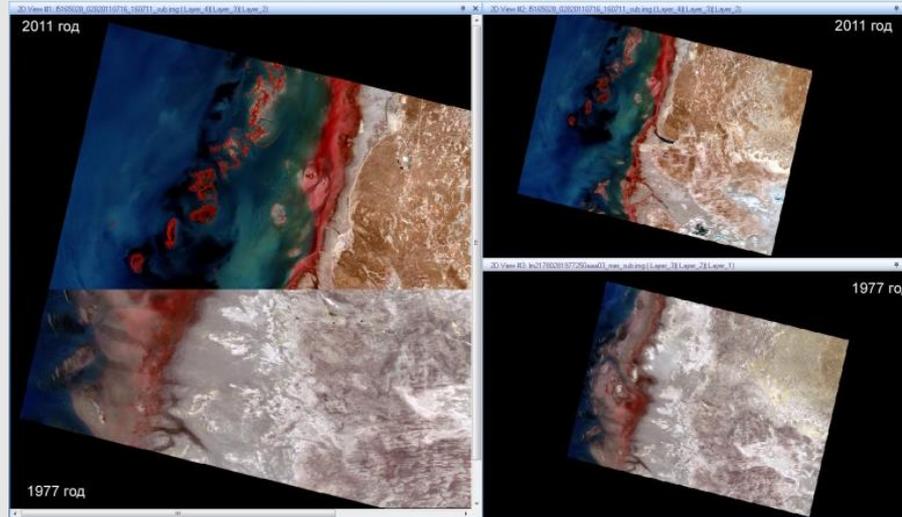

Comparative analysis of Landsat satellite data for the period 1977-2013

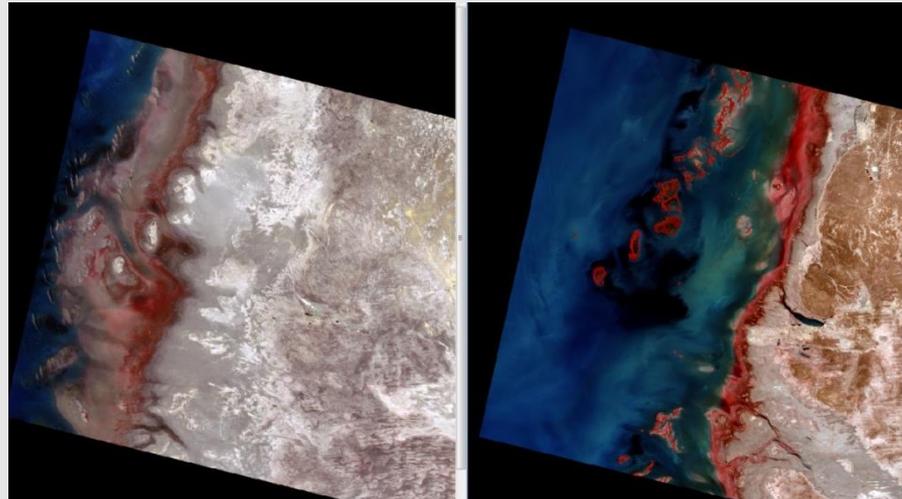

Satellite image
LANDSAT8.
(multi-channel radiometer
OLI (Operational Land
Imager))

Date: May 2, 2013

For the retrospective analysis of shoreline change were used Landsat data for the period from 1977 to 2011, characterized by significant fluctuations of the Caspian Sea.

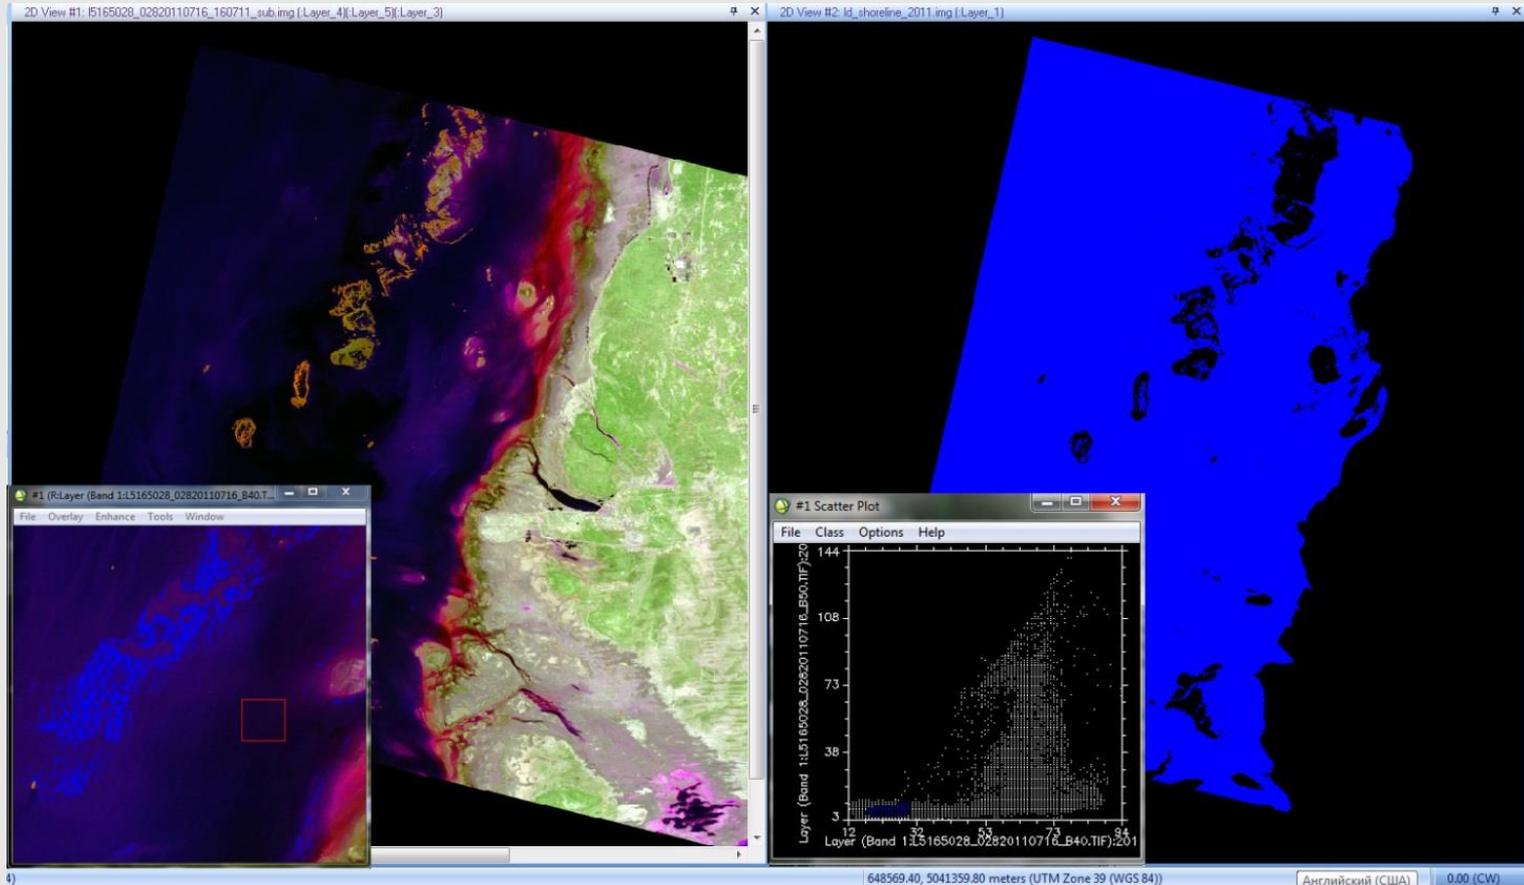

Satellite image Landsat-2 ERTS.
Date: September 7, 1977

Satellite image Landsat-5 TM.
Date: July 16, 2011

Creating a mask of the water surface

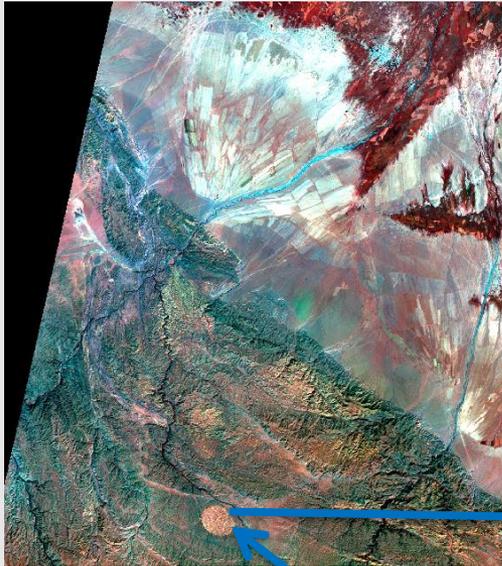

As a basis to obtain coastline for each separate year, was the mask of a space image, which is a process of isolation of pure class of water surface with the use spectral analysis tool 2-D Scatter Plots.

Satellite image Landsat-5 TM.
Date: July 16, 2011
Channels: R-4 G-5 B-3

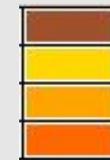

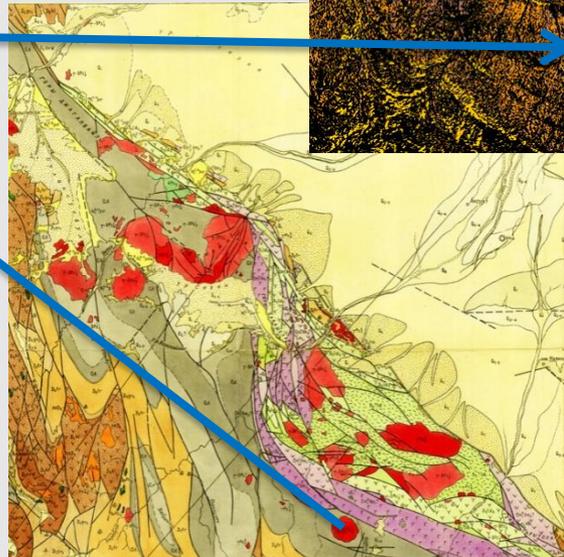

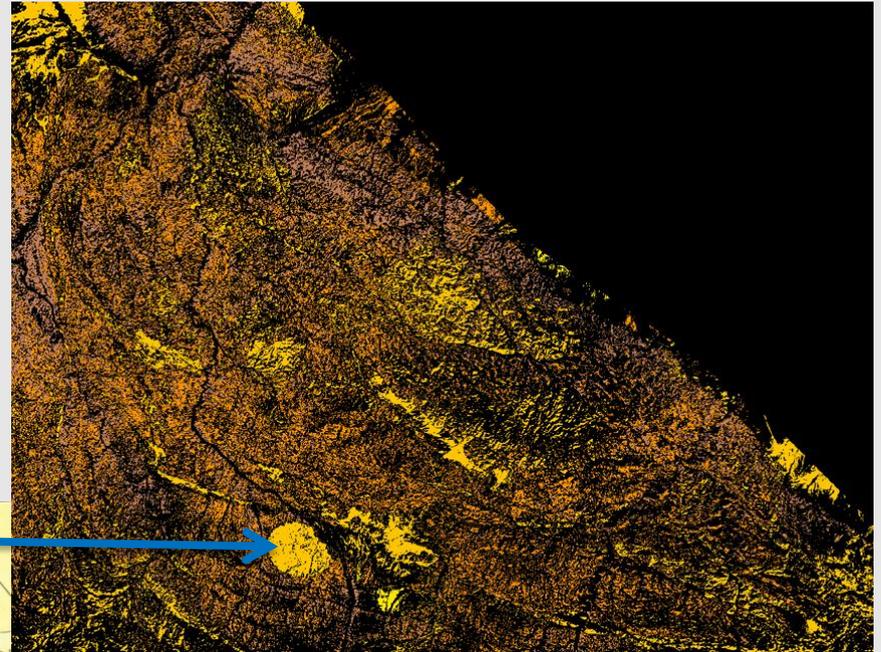

Mask of the water surface from satellite
imagery Landsat-5 TM.
Date: July 16, 2011

Lithological interpretation of Remote Sensing Data

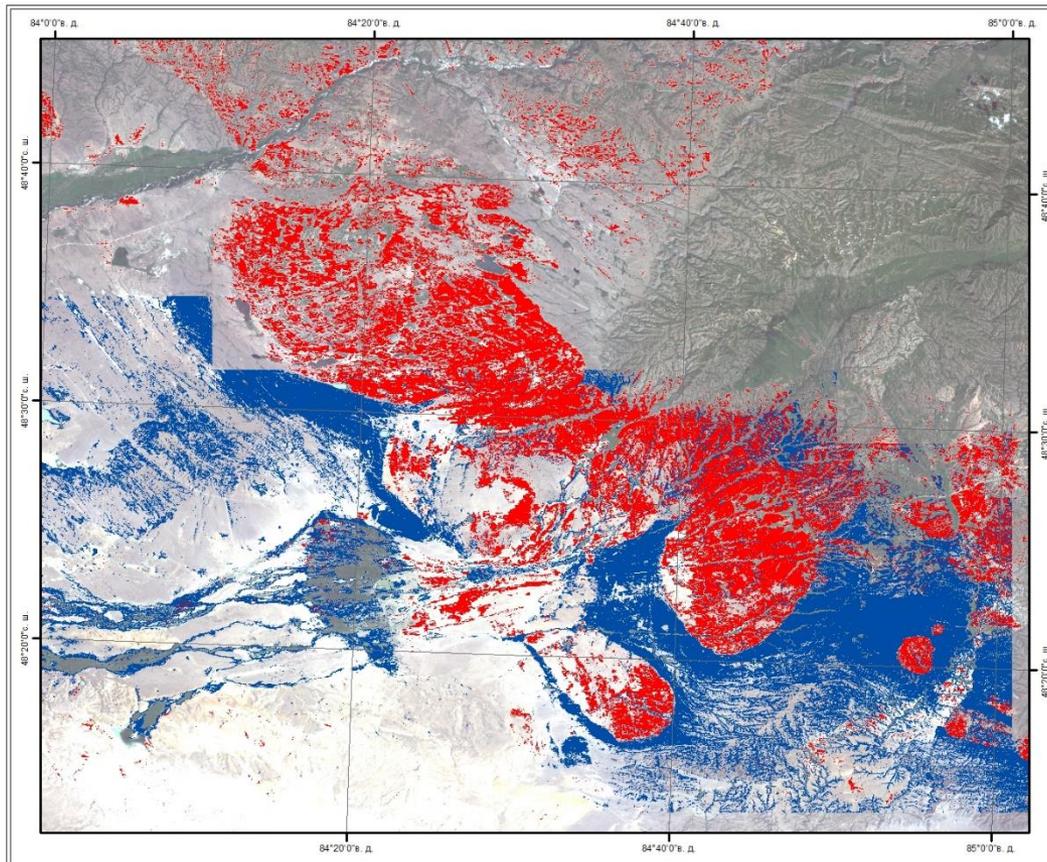

Landsat -8 (2013-09-02)

Comparative analysis of geological materials and satellite data

Effusives with different composition
The Quaternary deposits
Intrusions with acid composition
Terrigenous deposits

Map-Mask of hornfels distribution on the with granites

Legend

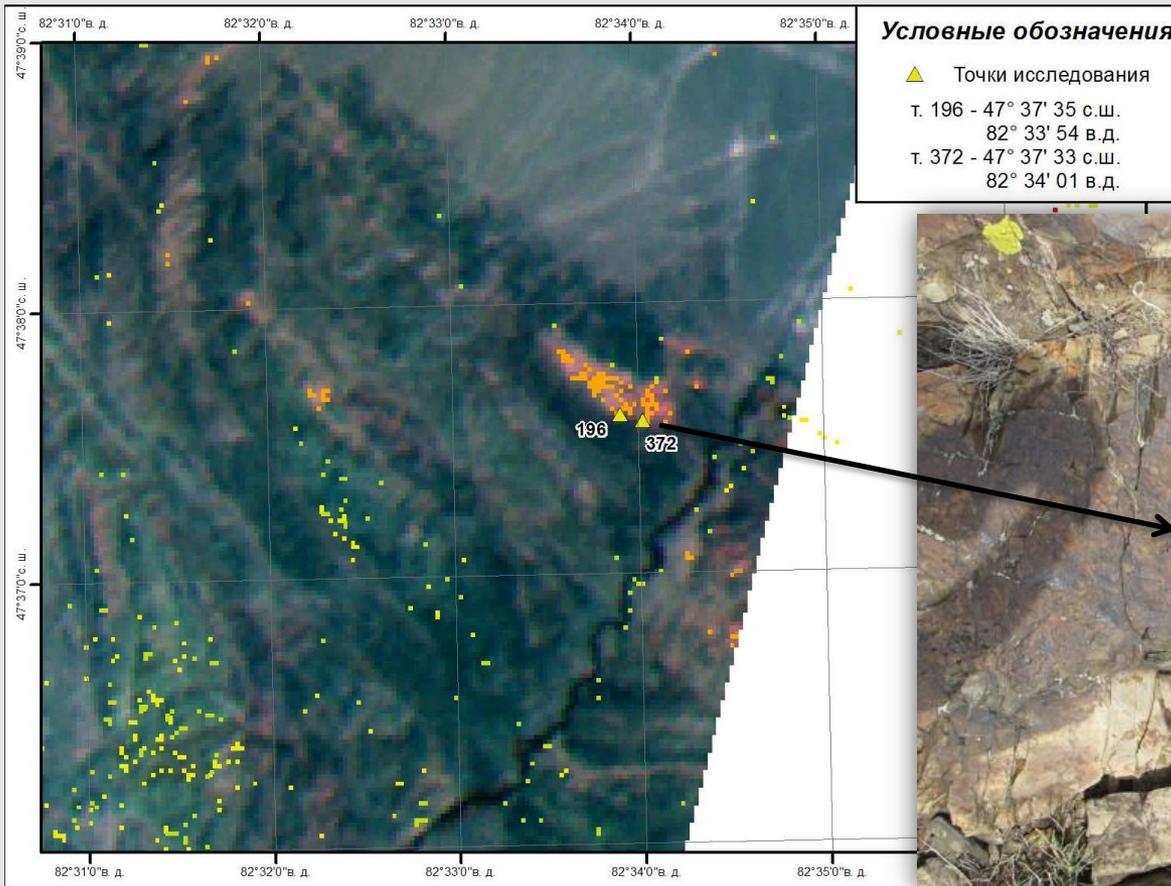

granites distribution area

hornfelsed rocks distribution
area

Условные обозначения

-  площадь распространения гранитов
-  площадь распространения ороговикованных пород

Verification of remote sensing data

**Desert varnish in the form of crust
from hydroxides of iron**

**Map-mask the index of possible
manifestations of iron**

Airborne and ground geophysics

Scope:

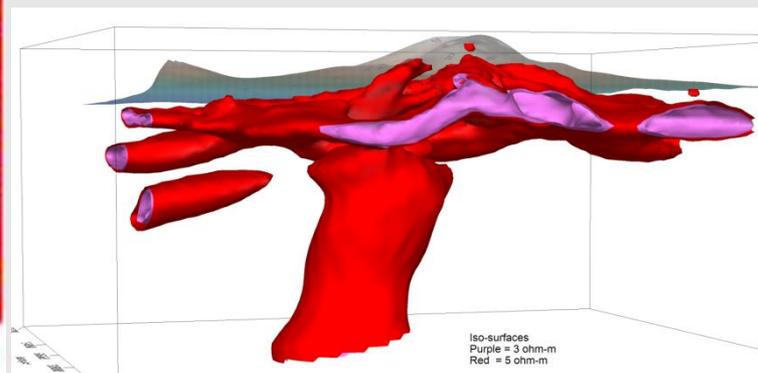

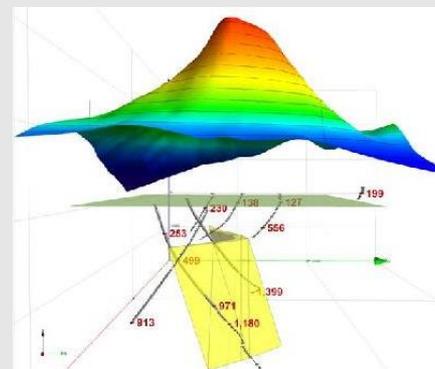

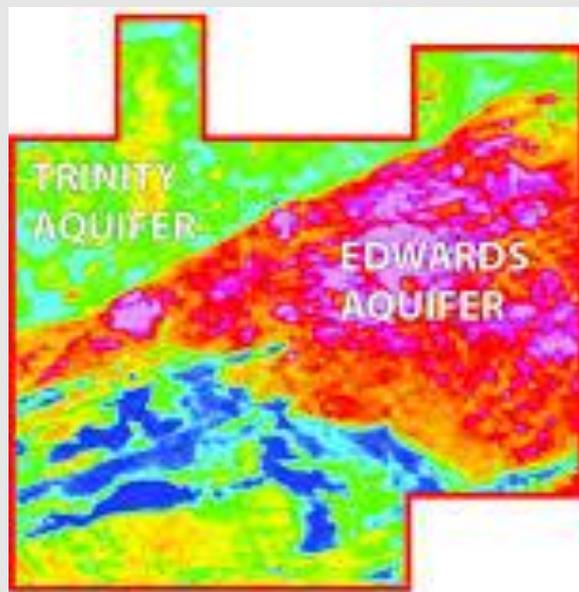

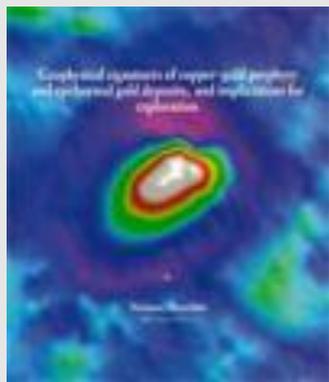

- **Technologies – magnetics, gravity, MT/AMT
EM, Electro-Magnetics, IP(induced polarity)**
- **Industries - mining, petroleum, water, geothermal**
- **Mode - airborne, ground, borehole**
- **New leading edge technologies**

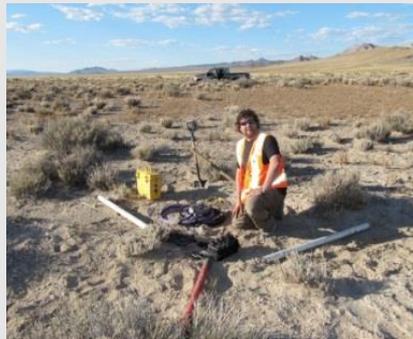

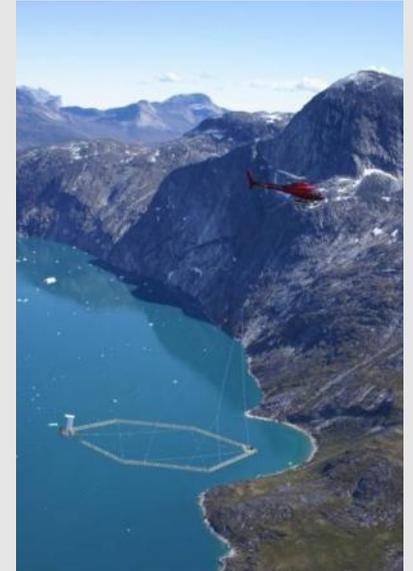

Exploration - Разведка

Mining- Oil and Gas – Groundwater-Geothermal

- грунтовая вода
- горнорудная отрасль

Integration of surface and subsurface data sets

Data integration benefits

Discover Resources

- Extend Existing Mines
- Advanced Exploration
- Regional Exploration
- Industry Exploration

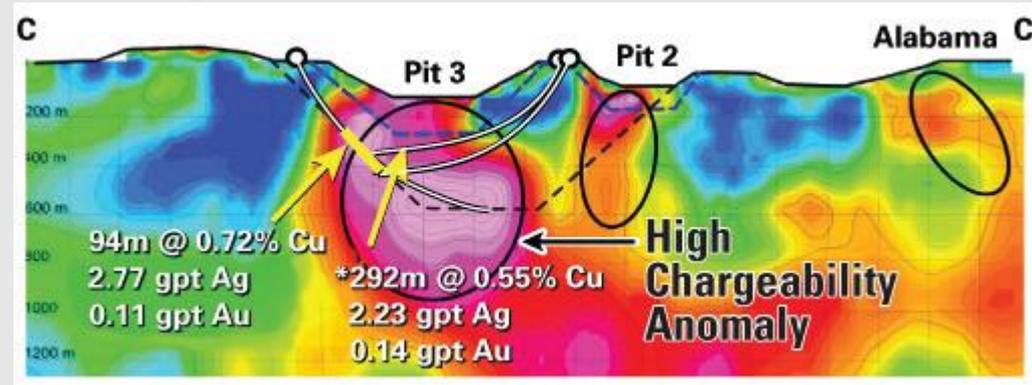

обнаружения ресурсов

- Расширение существующих шахт
- Расширенные исследования
- региональная разведка
- отраслевая геологоразведка

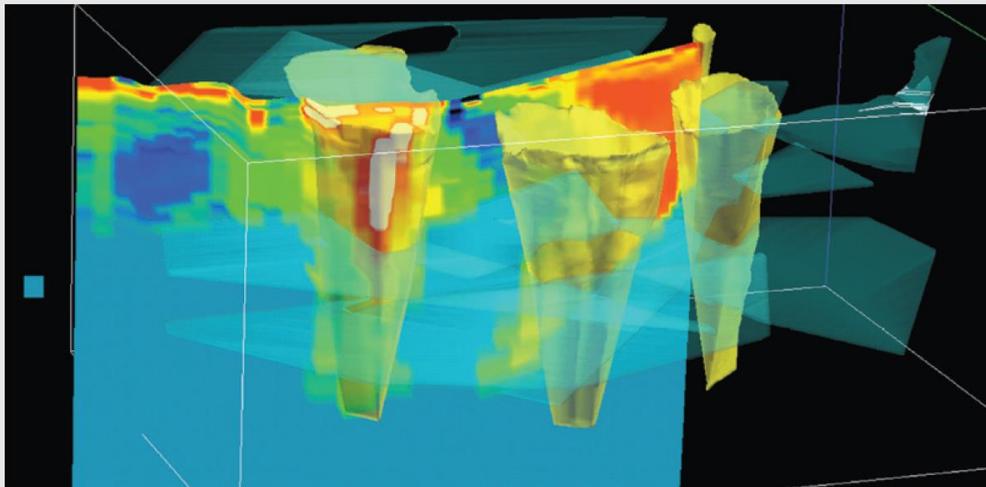

Extend Existing Mines Расширение существующих шахт

Employment/Services

Social and economic impact

Copper Mountain, Canada

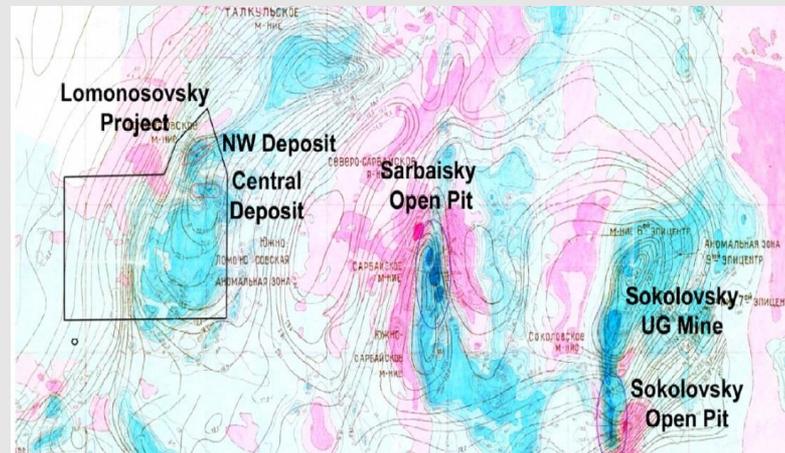

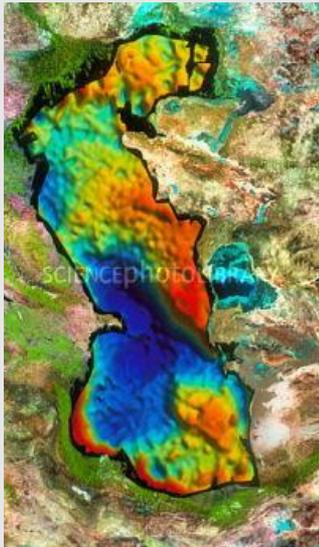

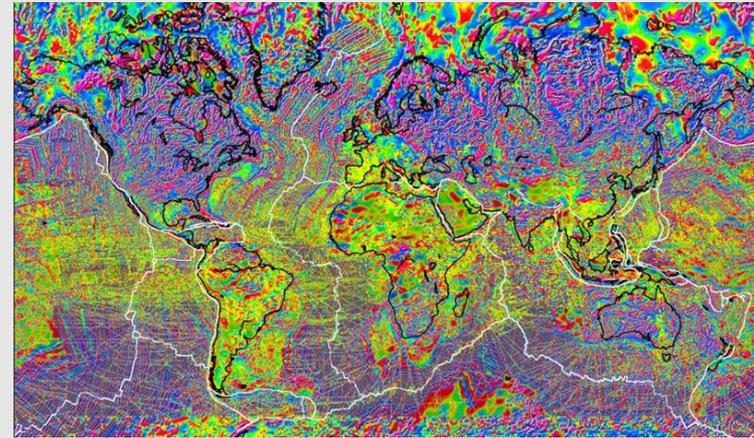

Jwaneng Diamond Mine, Botswana

Tax base/Revenue source

Large Scale Mapping

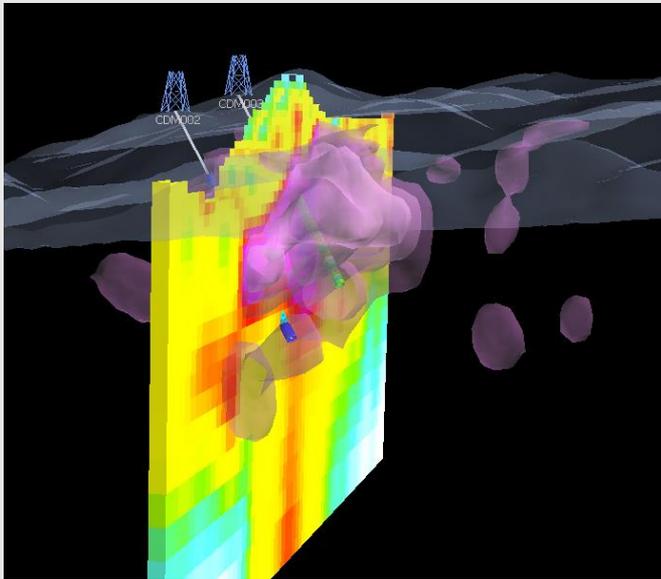

Региональная Разведка

Regional Exploration

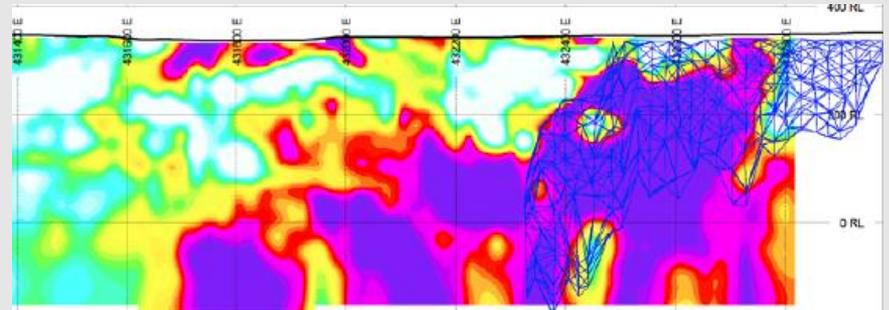

Advanced Exploration

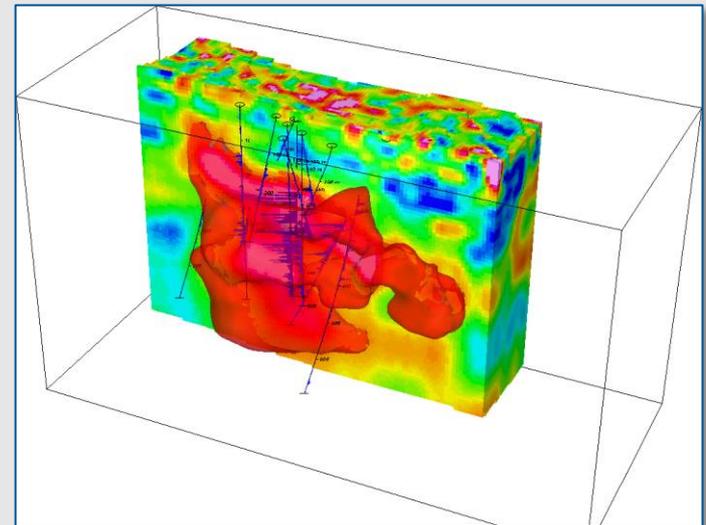

Расширенные исследования

Santa Cecilia, Porphyry Chile

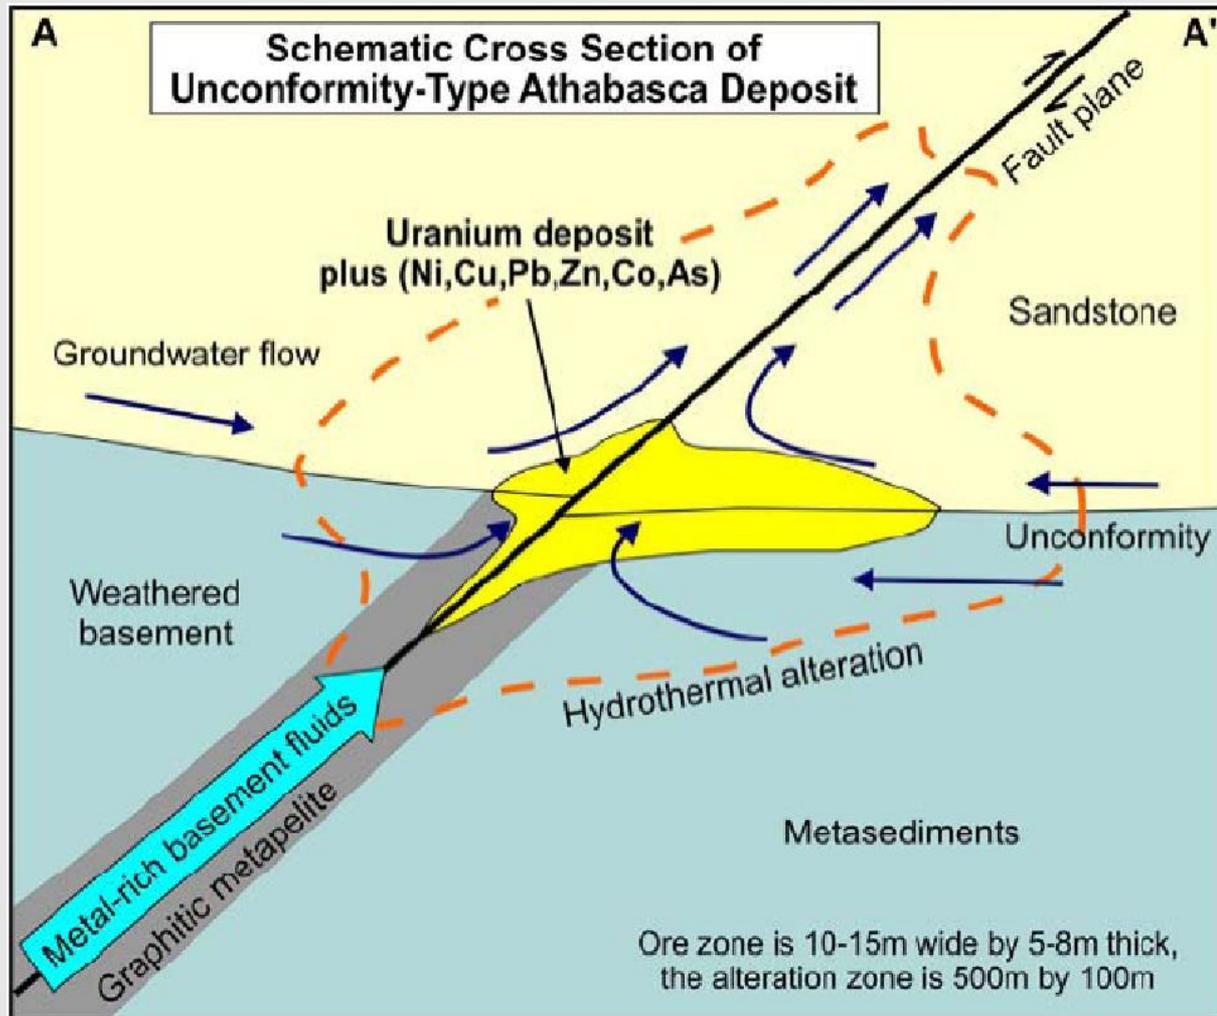

Junior Lake, Nickel, Canada

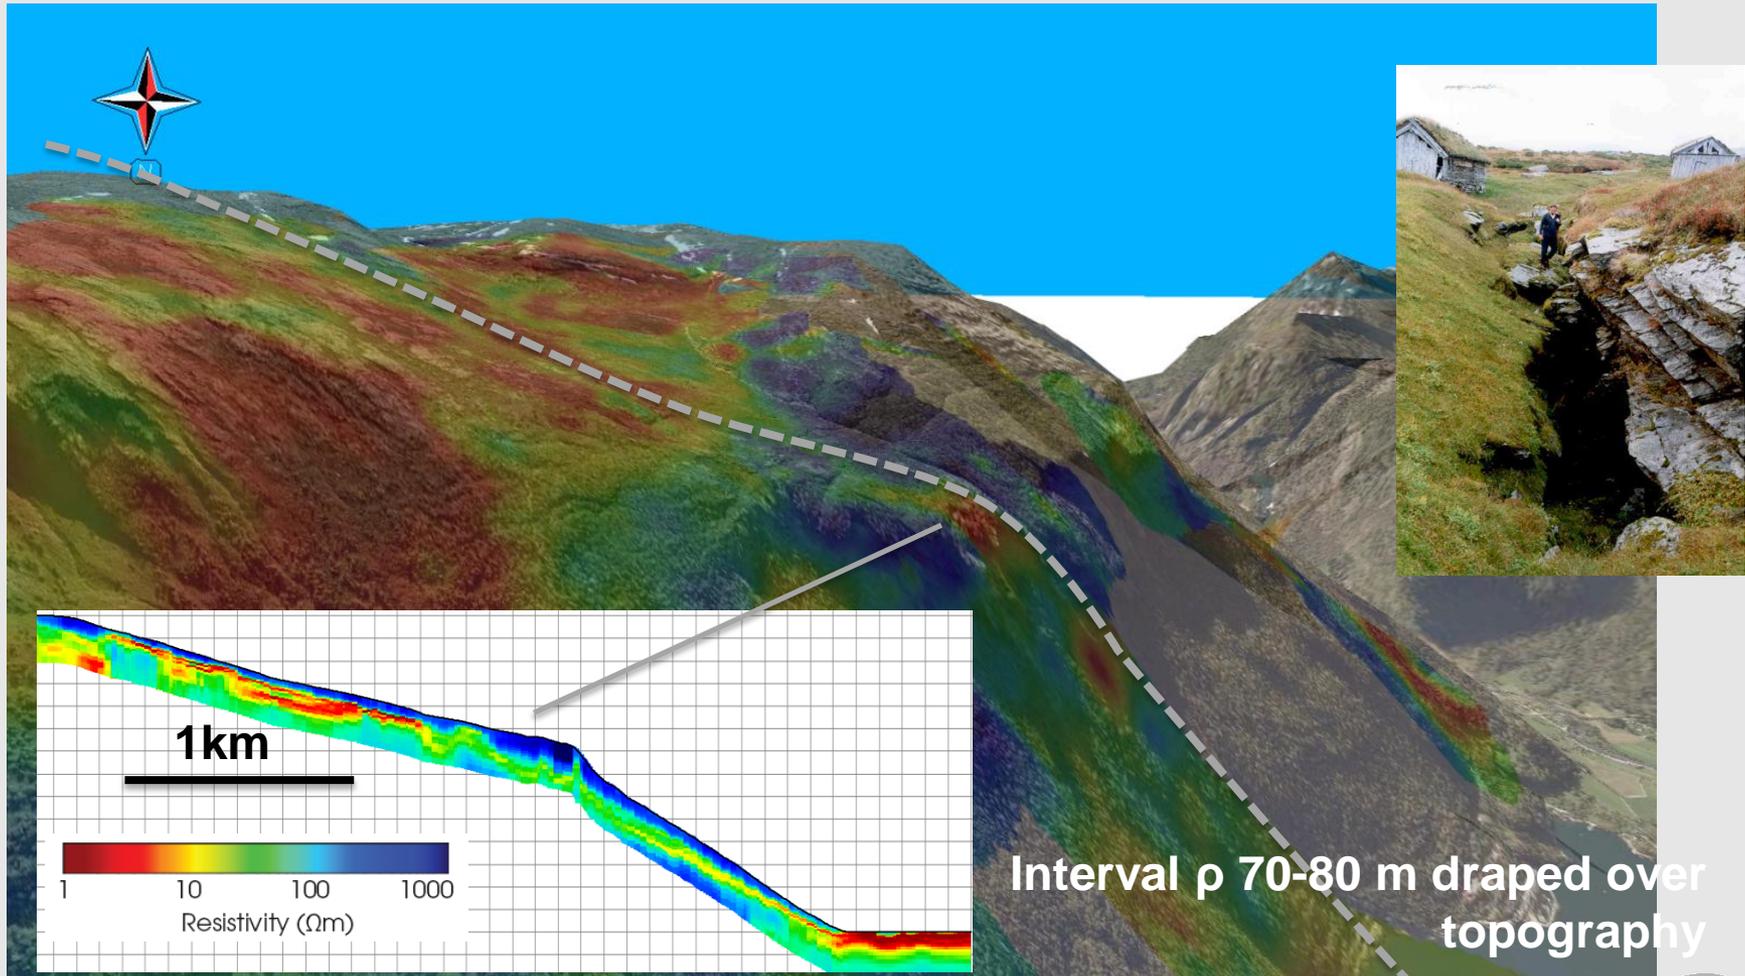

Mumbwa Copper IOCG, Zambia

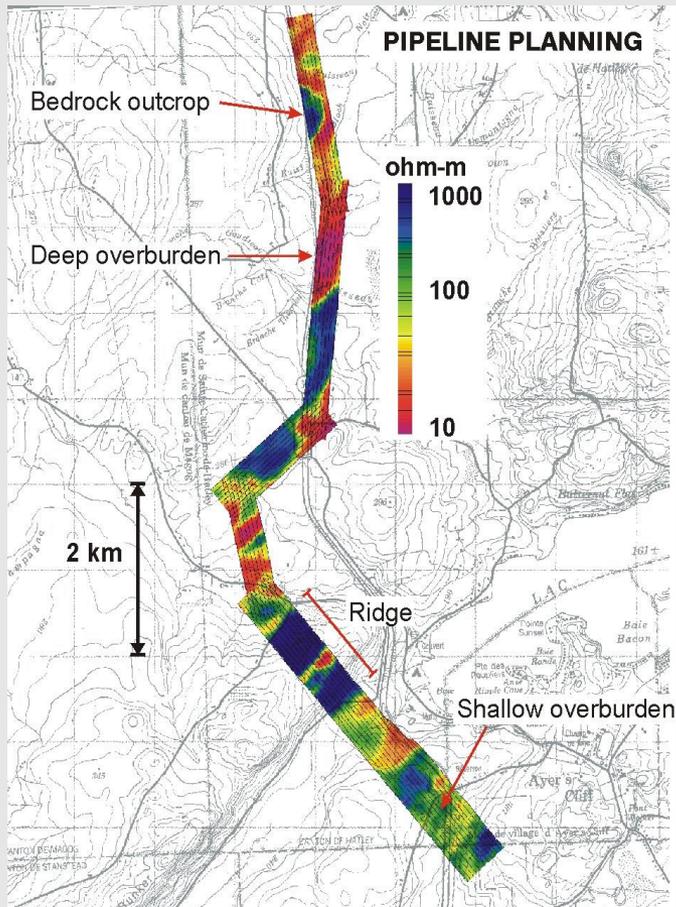

Alteration Plumes – Uranium Analogy

Engineering - Complex anomalies connected to rock slides

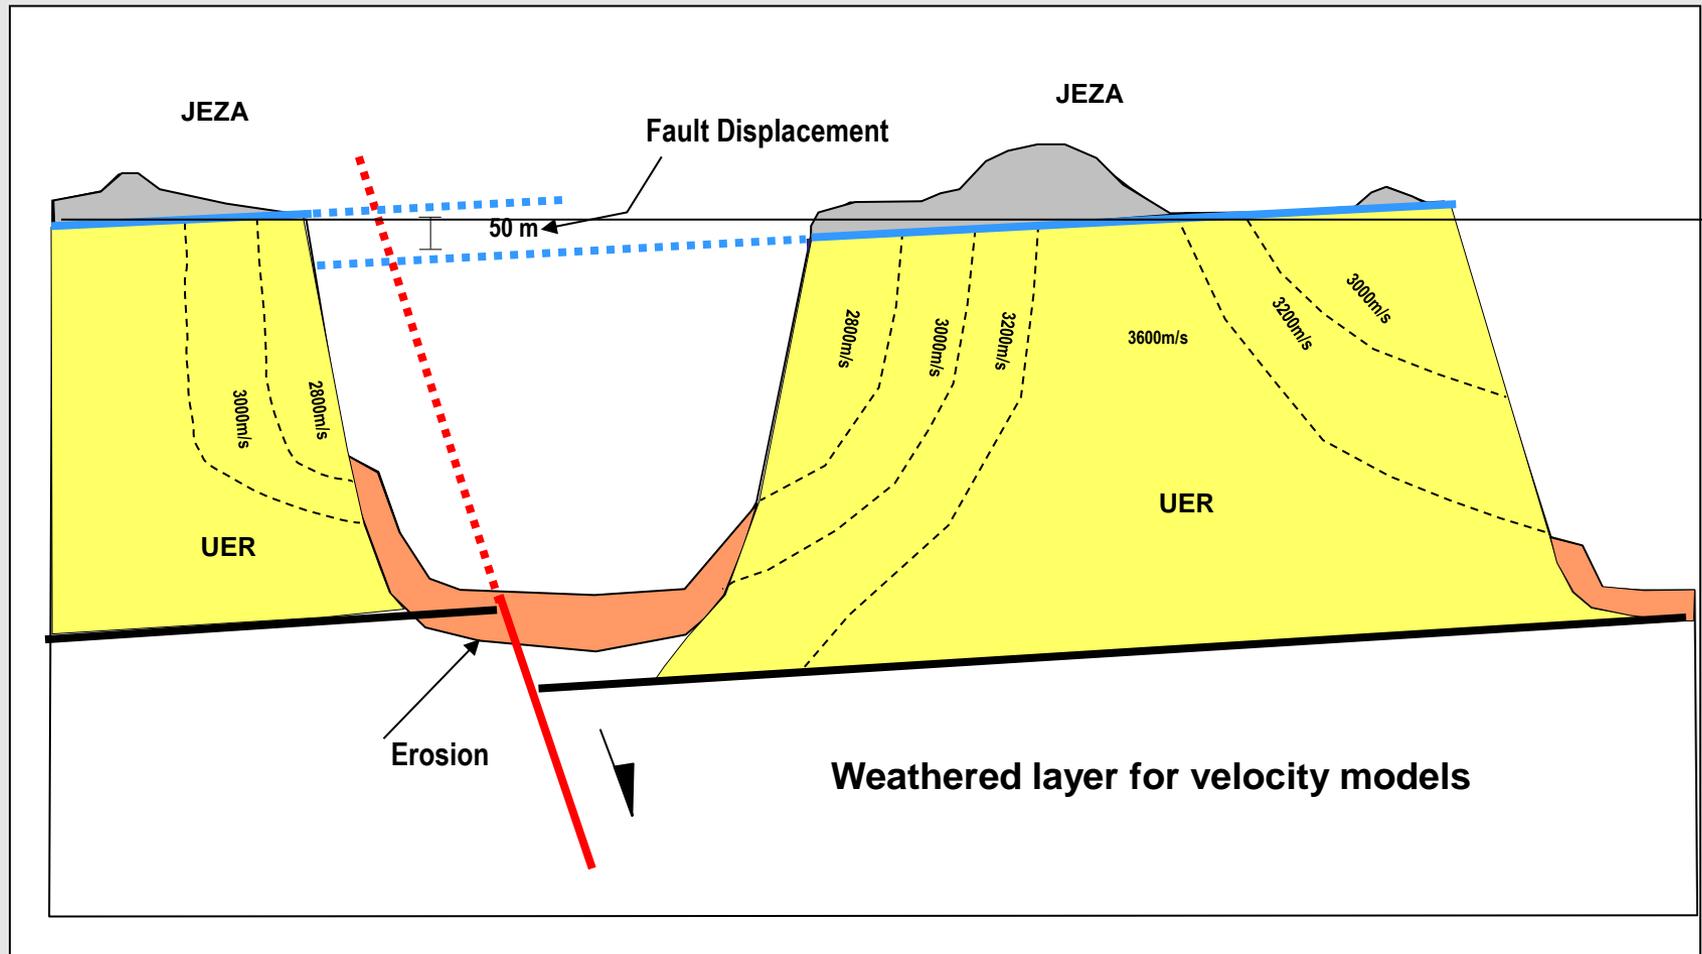

Pipeline and route Planning & Detection

- Pipeline detection: horizontal gradient mag, low and slow acquisition.
- Pipeline corridor mapping
 - Identifying bedrock to minimize blasting cost
 - Map conductive geology for installation of cathodic protection

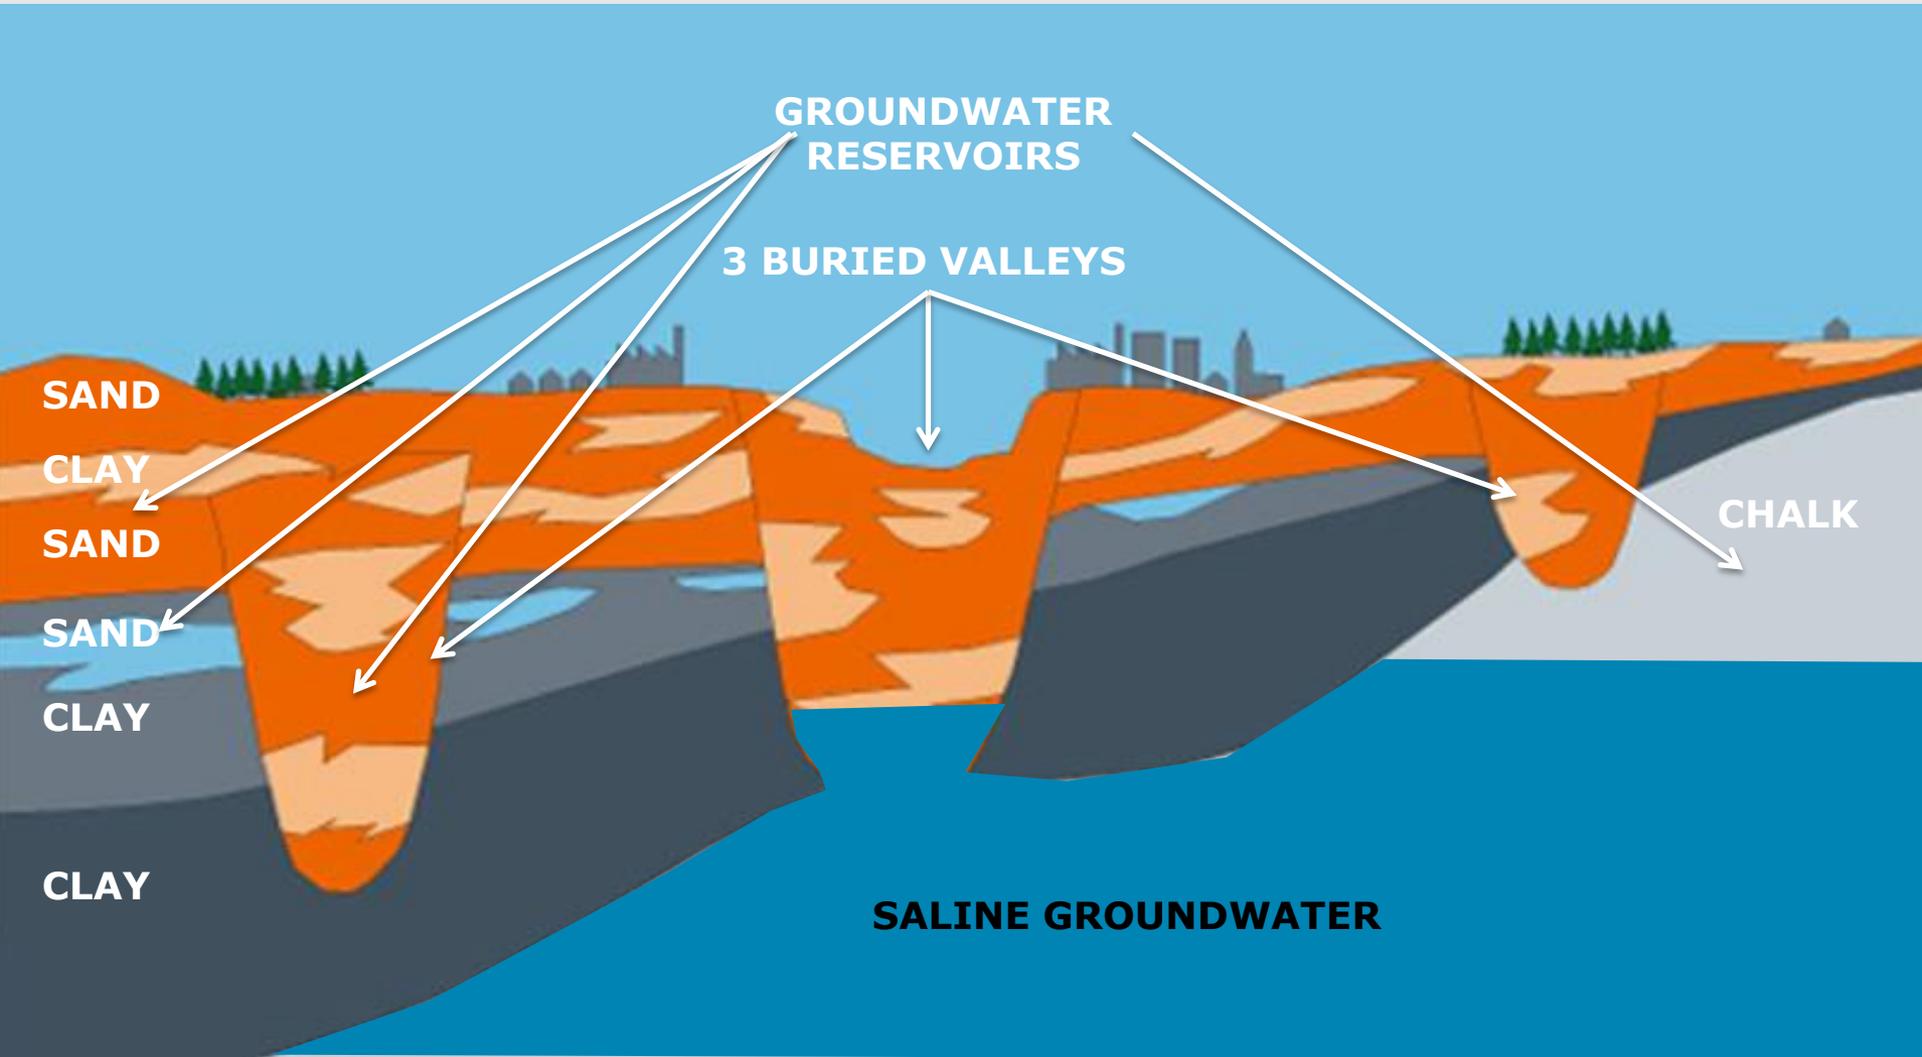

Fault Displacement

Wadi erosion obscures fault.

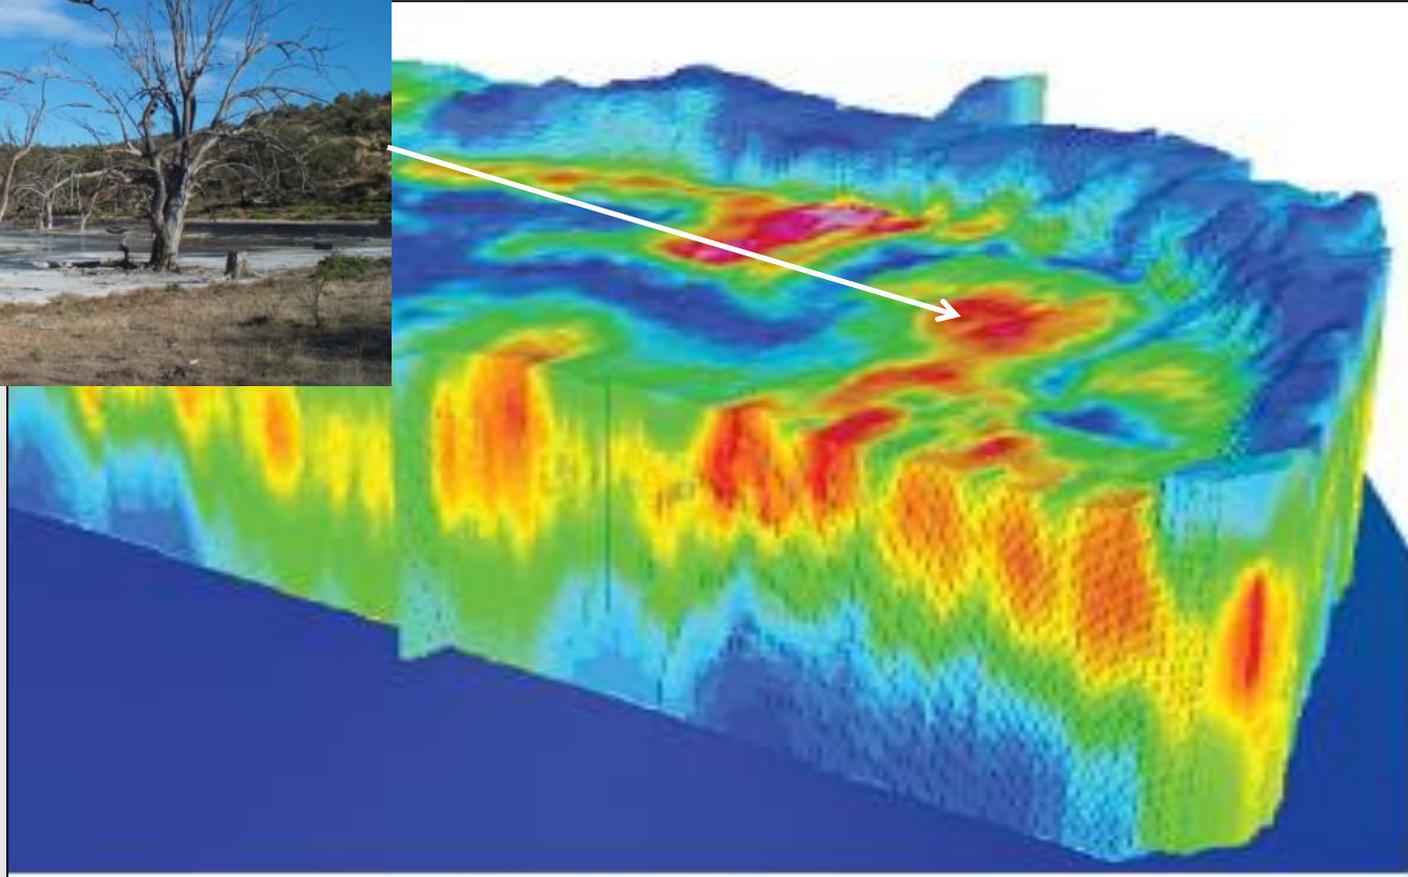

Groundwater resources

25

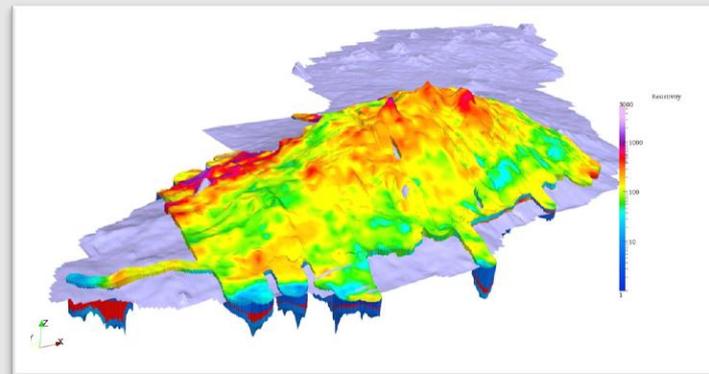

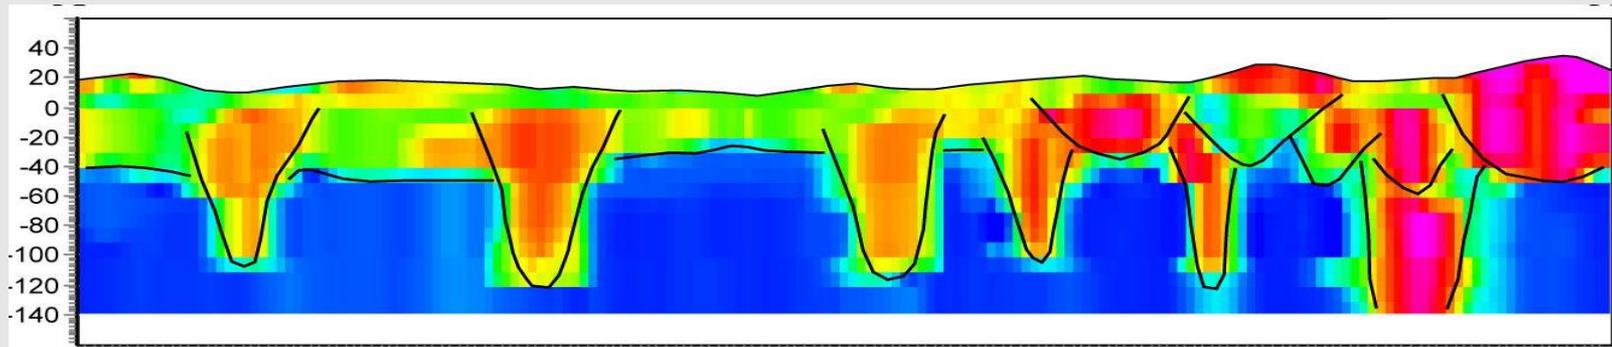

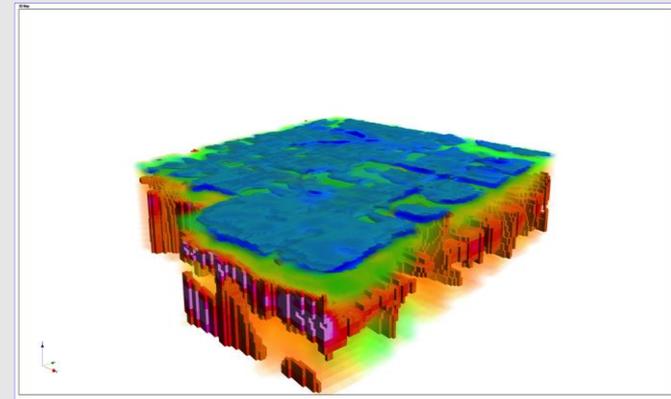

Salinity Mapping Murray River, Australia

Deliverables

- **Wide variety of products available**
- **1D, 2D and 3D imaging**
- **Quick delivery of preliminary data**

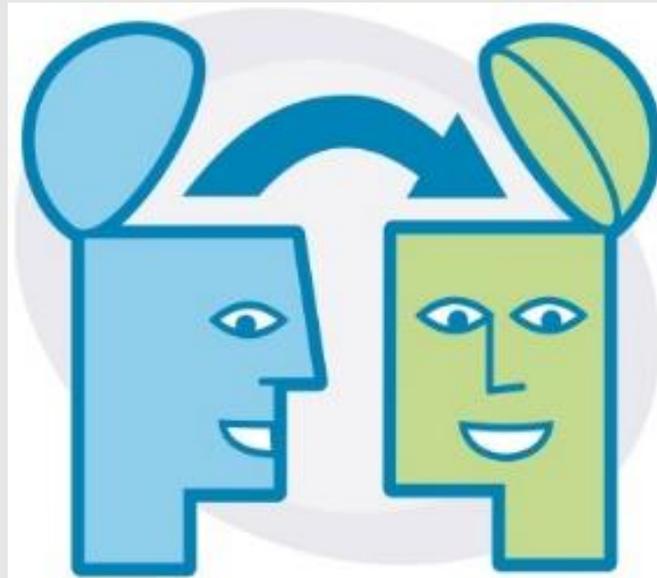

Knowledge Transfer

Technology – Operations – Interpretation

Передача знаний

Технология – операции- интерпретация

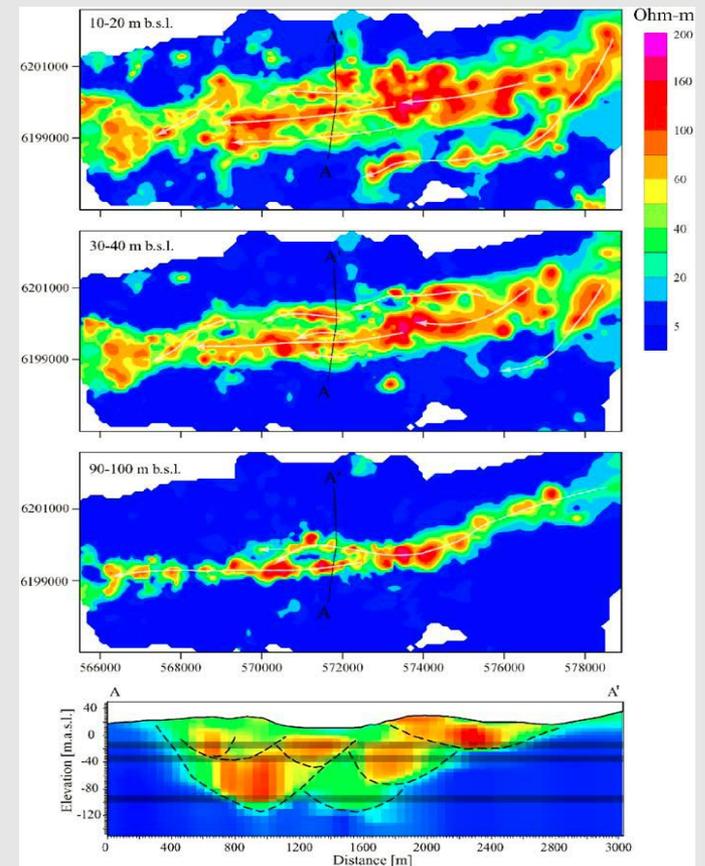

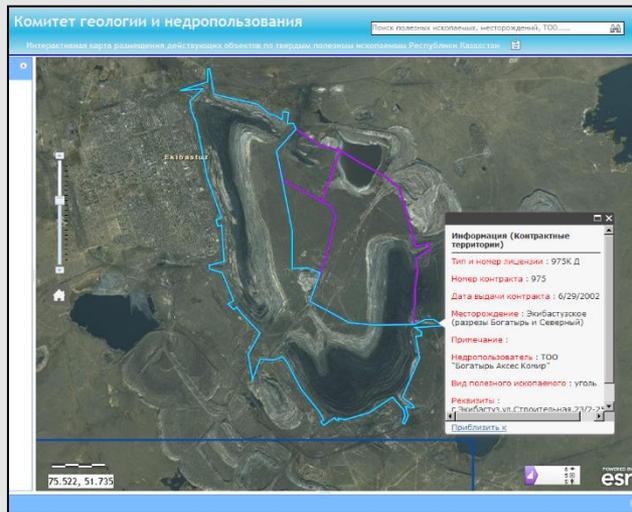

Develop relationships with local Universities
Mentor geophysical interns and graduate students

Opportunities of geoportal

The project was developed on behalf of the Committee of Geology and Subsoil Use of RoK in 2013-2014 and continues today

- 1) Search of subsoil objects according to different criteria
- 2) Browse available information about the object
- 3) Formation of application for the development of a new object of subsoil
- 4) Drawing of the new subsoil object in the object drawing mode or by entering of the existing coordinates

Opportunities of geoportal

Комитет геологии и недропользования

Интерактивная карта размещения действующих объектов по твердым полезным ископаемым Республики Казахстан
